

Instructions for Authors

Manuscripts may be submitted to any member of the Editorial Board. Authors are asked to include two copies of the manuscript or to send a PDF or PS file via e-mail. The first page should contain the title of the paper, authors' names and addresses, with e-mail addresses if possible, a suggested running title of less than 70 characters, and a brief but informative abstract.

Articles in T_EX. Please do not submit source files for manuscripts until requested to do so. However, when papers are accepted, source files will be needed. Please keep formatting macros to a minimum, to make conversion of files more accurate. Do not worry about chapter headings, running titles, bad page breaks, etc. and avoid adding extra space and using glue to improve the appearance of the manuscript.

Please ensure that the material has been carefully proof-read and that all input and style files used are made available to the publishers.

Figures or Graphics. Figures created via a graphics package should be saved in encapsulated PostScript (EPS) format. A separate file for each graphic should be submitted. In a T_EX document EPS files may be incorporated into the T_EX file by using one of the standard macro packages.

Footnotes. Footnotes should be kept to a minimum and be as brief as possible. They should be numbered consecutively and placed at the foot of the page to which they refer.

References. References should be collected at the end of the paper and numbered in alphabetical order of the authors' names. Titles of journals should be abbreviated as in *Mathematical Reviews*. The following examples show the preferred style for references to a book, a preprint that has appeared on arXiv, a paper in a journal, a paper in a proceedings volume, and an unpublished dissertation.

- [1] J. L. Alperin. *Local representation theory* (Cambridge University Press, 1986).
- [2] C. Bonnafé and M. J. Dyer. Semidirect product decomposition of Coxeter groups. Preprint (2008). <http://arxiv.org/abs/0805.4100>.
- [3] W. Feit and J. G. Thompson. Solvability of groups of odd order. *Pacific J. Math.* **13** (1963), 774–1029.

- [4] G. Higman. Some non-simplicity criteria for finite groups. In *Proceedings of the Second International Conference on the Theory of Groups*, Lecture Notes in Math. 372 (Springer-Verlag, 1974), pp. 367–376.
- [5] J. D. King. Finite presentability of Lie algebras and pro- p groups. Ph.D. thesis. University of Cambridge (1995).

Authors should notify the Journal of Group Theory of any **changes of address** while their paper is under consideration.

In all other matters arising before the acceptance of papers, authors are requested to communicate directly with the appropriate editor.

Authors will receive a PDF file of the **page proofs** for correction. Only typographical errors should be corrected in the proofs. If excessive alterations to the original manuscript are requested after the paper has been typeset, the authors will be charged for the cost of resetting.

Fifty **offprints** of each article will be supplied free of charge.
